

THE FIRST OF ITS KIND

Digital Dictionary Ecosystem for Ottoman Turkish

LexiQamus went online in 2016 as the **first digital tool** built to recover unreadable words in Ottoman Turkish texts. Make out even a few letters and it puts every possibility in the digitized dictionaries in front of you within seconds.

With version 3.0 a word is searched in all of its forms; results come with their linguistic breakdown and the original scan, in an interactive result list and entry window.

LEXIQAMUS VERSIONS

2016 1.0**2020** 2.0**2026** 3.0

9 Dictionaries, 17 Volumes

A rapidly growing collection,
digitized by an expert team in
BuildLQ, our purpose-built program

491,000+

Words, phrases, and entry records

DEVELOPED IN TÜRKİYE

In the world's leading research institutions

- Oxford University
- Yale University
- Princeton University
- Chicago University
- Michigan University
- Pennsylvania University
- Toronto University
- Leiden University
- Collège de France
- All Universities and Research
Institutions in **Germany**
and many more

Since the beginning of 2026 LexiQamus has been open to every university in Türkiye and Northern Cyprus through **TÜBİTAK ULAKBİM EKUAL**.

On campus there is no sign-up at all; off campus a single registration with an **.edu.tr** address is enough.

No VPN, no proxy.

What version 3.0 brings

SEARCH RESULTS

SEARCH BY SPELLING: **عالم** âlem âlim

224 RECORDS FOUND.
9 DICTIONARIES (17 VOLUMES) SCANNED.

EXPAND SEARCH SIMILAR PRONUNCIATION 38

RESULT	CATEGORY	HEADWORD	DICTIONARY
LEMMA 25 Results without an affix, including the base or singular form of a value. Ex: kalem, dost			
عالم	âlem	HEADWORD → عالم	Lehçe-i Osmani, 1888 PAGE 1228
عالم	âlem	SUBHEADWORD → عالمینا	Kamus-ı Türkî, 1899 PAGE 924
عالم	âlim	RELATED → اوقومش	Lugat-ı Ebuzziya, 1888 PAGE 203

 - Every **spelling variant** of the word
 - **Source dictionary** and **page number** on every line
- **209,000+** Headwords
 - **152,000+** Subheadwords
 - **130,000+** Related words

lexiqamus.com

Three steps, a guided search

1

Enter the letters you can read

One box per letter. You can type with your own keyboard or with the on-screen Ottoman keyboard.

2

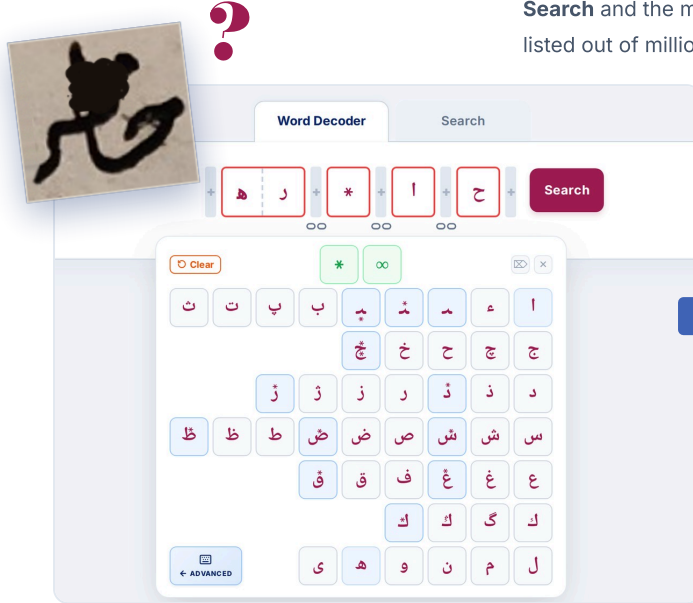

Mark what you cannot read

* stands for an unknown letter, ∞ for an unknown number of letters. A box can hold several alternative letters. Press **Search** and the matching records are listed out of millions of possibilities.

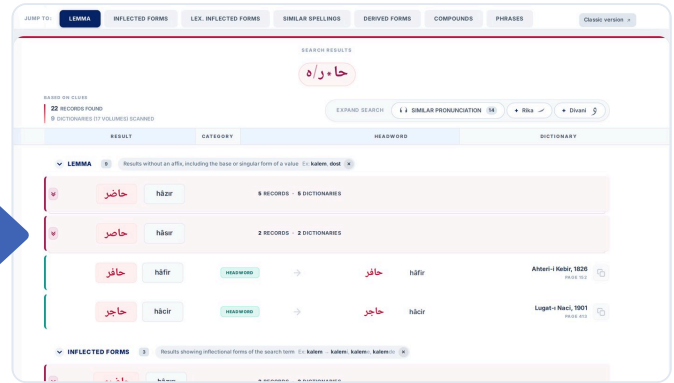

3

Let the algorithm guide you

If you still cannot find it, the algorithm expands the search to letters that sound or look alike in the **Rik'a** and **Divani** hands.

The Word Decoder and the purpose-built on-screen Ottoman keyboard.

Results are grouped under seven categories, from the barest form to the fullest:

Other distinctive features

Visual dictionary

Every marked word on the scan is clickable and starts a new search.

Transcription and translation

Modern Turkish transcription, transliteration in five systems (İSAM, İJMES, Brill, DMG, Turkish academic), and translation into ten languages. Entry texts outside the verified set were machine transcribed as well, so your searches return results in those too.

Morphological analysis

The parts of a word are separated out by language of origin; the root, its derivations, compounds, and phrases are gathered in a single window.

Error reporting

A report button sits beside every word, so data already verified by the expert team is also checked by its users.

Citation ready

Source citations for every entry copy in **Chicago**, **APA**, and **Harvard** format with one click.

The entry window opens on the dictionary's original scan, with language and transliteration tabs across the top. Every digitized word is live: hover for its reading, click to start a new search.
